Academic Foundation Programme – Introduction to clinical research

Rhys Davies, lead for critical care research education, Cardiff.
Matt Morgan, lead for critical care research, Cardiff.

Objectives:

- Understand the importance of research as a tool to improve patient care, staff recruitment/retention and system improvements (GCP/online/in person).

- Understand the stages of clinical trial research from protocol design, funding, ethics application, site delivery, safety reporting, analysis and dissemination (GCP/online/in person).

- Witness the process of screening, recruitment, intervention, safety reporting and follow-up in critical care research trials (in-person).

- Discuss the concept of deferred emergency consent and the ethical framework that underpins it (in-person).

- Experience how research can be integrated into clinical care, nurse led for scale and safety and how it impacts on patient care (in-person).
